Есть ли клоака	нет
Подозрительные слова	affiliate, whitelist, casino, slots, offer, landing, gate, redirect

После разбора точки входа (MShopApplication → StartupActivity / HomeActivity alias), сети, WebView/Custom Tabs, строк и SharedPreferences: кастомных/неизвестных доменов нет. В domain_checks.json список подозрительных доменов пуст — региональные витрины Amazon (amazon.ae, amazon.ca, amazon.co.jp и др.), Google/Firebase и Bugsnag исключены как крупные известные сервисы, отдельные таблицы «Проверка домена» не строятся.

Клоаки нет: не найдено тихой gate/offer-проверки с развилкой «оффер или обычное приложение». GetGatewayUrlStagedTask при старте берёт HTML-шлюз маркетплейса Amazon через ActivityUtils.getHTMLGatewayUrl (Blackjack/Mozart) — это адрес витрины, а не фильтр трафика. Splash AAPI (TargetingRequest) ходит на data.<amazon-domain> / api.amazon.com/shop для таргетинга заставки. WebView (MASH, CustomWebView, identity MAP) и Custom Tabs (androidx.browser + запрос CustomTabsService) обслуживают магазин и вход в аккаунт. Play-название «Amazon Business B2B Shopping» и APK-label «Amazon Business» — одна линейка, не белая оболочка. Слова offer/landing/gate/redirect/affiliate/whitelist в коде относятся к офферам магазина, лендингам, шлюзу витрины и служебным whitelist'ам Amazon, а не к cloaking.
