SharedPreferences	Да. Основные хранилища: 1) MyPref — remote-конфиг клоаки/рекламы: ключ response (JSON с splash_inter, splash_redirect, link_redirect, link1/2/3, livetv, topon_*, Admob_*, FB_*, adposition), а также interstitial_id, adposition. 2) HeartRate — флаг онбординга IsFirstTimeLaunch. 3) OneSignal (OneSignal.xml) — GT_APP_ID / player id / IAM / outcomes / JWT и служебные ключи SDK. 4) Google UMP/Consent — stored_info, consent_status, consent_type, privacy_options_requirement_status и др. 5) GMS/Firebase — com.google.android.gms.appid и prefs Firebase Messaging.
Есть ли клоака	да — классическая офферная клоака: SplashActivity тянет remote JSON с GitHub (ApplinkActivity URL → smtpatel9211/2026/.../com.icefishing.icefishingliveapp); при splash_redirect=1 открывает link1/link2/link3 через Chrome Custom Tabs (сейчас: gamescritique / quereka / djdvk). Есть MWebActivity (WebView) для произвольных web_url; рекламные ID и TopOn/FB/AdMob тоже приходят из того же remote JSON. PairIP — это Play Integrity/license check, не клоака.

Краткие выводы

- Native Android (AGP 8.9.0, minSdk 24 / targetSdk 35) с Kotlin, WebView и Custom Tabs.
- Стек монетизации: AdMob + TopOn/AnyThink + Meta Audience Network + OneSignal 5.9.4 + Firebase Messaging; контент игр — Gazeop.
- Есть офферная клоака через remote JSON на GitHub (splash_redirect → Quereka/gamescritique/djdvk в Custom Tabs).

Источник: статический разбор XAPK/APK (manifest, resources, DEX/jadx, META-INF versions) + fetch активного remote JSON.
