Пояснение

Это официальное приложение Amazon Alexa. Название в карточке и подпись внутри APK совпадают: Amazon Alexa. Пакет com.amazon.dee.app, версия 2.2.716377.0 (versionCode 965237705).

Пакет whispercloak — это шифрование для сопряжения устройств WhisperJoin: AES-GCM, обмен ключами ECDH, сертификаты. Там нет запроса «кому показать сайт», нет встроенного окна чужого лендинга и нет развилки оффер/обычное приложение.

При запуске AndroidAlexaApplication поднимает обычный каркас Alexa, затем MainActivity со заставкой и домашним экраном голосового помощника. Встроенное окно сайта грузит витрину Alexa (alexa.amazon.com, spa/index.html), вход в аккаунт Amazon и служебные адреса вроде Doppler. Внешние ссылки открываются как обычный переход, не как проверка трафика. Custom Tabs используются входом Amazon MAP (логин), возврат идёт на com.amazon.mobile.identity.verification://amazon.com.

Удалённые настройки Feature Service и Arcus — флаги функций Alexa и звонков, не переключатель «казино или белая оболочка». Строки aeda.ae, afnic.fr, amnic.net, auda.org.au лежат в списке публичных суффиксов Mozilla, это реестры доменов, а не адреса схемы. Слова cloak/whitelist/offer встречаются в крипто-библиотеке, белом списке хостов Amazon Blueprints и лицензиях, не в gate клоаки.
