Есть ли клоака	да

Как работает клоака

Приложение делает вид, что это обычный каталог мини-игр про зимнюю рыбалку (бренд Ice Fishing + встроенные HTML5-игры Gamezor). На самом деле при запуске оно скачивает с GitHub удалённый JSON-конфиг и по флагам из этого файла решает: оставить человека в «белой» игре или выкинуть его в Chrome Custom Tabs на внешние оффер-ссылки (квизы/гемблинг/промо).

Общая развилка

- «Белая» картинка: Intro / выбор языка-страны-возраста-пола → StartActivity → MainActivity и категории Gamezor. Игры открываются в MWebActivity (WebView) по URL вида [https://10761.play.gamezor.com/...](https://10761.play.gamezor.com/)
- Оффер: Chrome Custom Tabs (пакет com.android.chrome) со случайным выбором одной из трёх ссылок link1 / link2 / link3 из remote-конфига. Сейчас в конфиге это gamescritique / qureka / djdvk.

Как принимается решение

1. Launcher — SplashActivity (наследник ApplinkActivity). Проверяется интернет; без сети показывается диалог.
2. Показывается Google UMP-согласие на рекламу, затем приложение качает конфиг HTTP-запросом с зашифрованного URL в ApplinkActivity.
3. Ответ сохраняется в SharedPreferences MyPref под ключом response и сразу разбирается в поля: splash_inter, splash_redirect, link_redirect, link1-3, livetv, ключи TopOn/AdMob/Facebook Ads.
4. Инициализируются рекламные SDK (TopOn ATSDK.init, Audience Network). Через ~7 секунд готовится переход в белый Intro/Start и при splash_inter=1 показывается interstitial.
5. Если splash_redirect=1 (сейчас так в live-конфиге), при сценариях без interstitial / с ошибкой загрузки и в ряде ad-переходов вызывается k4.m.g(): случайно выбирается link1/link2/link3 и открывается в Custom Tabs. Флаг link_redirect дополнительно включает такие редиректы при определённых позициях рекламы (adposition).

На практике именно remote JSON на GitHub решает судьбу пользователя: разработчик может в любой момент сменить флаги и оффер-URL без обновления APK. Отдельной автоматической проверки «ревьюер Google / органика / платный трафик» в коде нет — развилка полностью ручная через конфиг.

Шифрование и скрытие

URL конфига лежит в ApplinkActivity открытым текстом (не XOR/AES). Тяжёлого шифрования оффер-ссылок нет. com.pairip.application.Application — обёртка Play Integrity/licensecheck, она не управляет клоакой. Cleartext HTTP разрешён networkSecurityConfig (для части офферов вроде <http://...qureka...>).

Что видит «боевой» пользователь по шагам

- 1) Сплэш Ice Fishing → 2) согласие на рекламу → 3) загрузка конфига с GitHub → 4) interstitial TopOn (если включён) → 5) при splash_redirect=1 открывается Custom Tabs с оффером; параллельно белый поток может продолжить в Intro/меню игр. Внутри белой части WebView грузит Gamezor; из меню также есть Custom Tabs на privacy (sites.google.com) и фейковые «Play & Win Coins»-креативы на u.djsofficial.com.

Важные ключи / домены

- <https://raw.githubusercontent.com/smtpatel9211/2026/.../com.icefishing.icefishingliveapp> — remote-конфиг клоаки и рекламы; без него нет актуальных флагов и оффер-ссылок.
- link1/link2/link3 (сейчас 24.go.gamescritique.com, 1084.mark.qureka.com, s.djdvk.com) — три боевых оффера, один из которых случайно открывается в Custom Tabs.
- topon_appid a67a9de439f864 / topon_appkey 3ada7b7b798c5a5c291f7b0420a05eed — включают медиацию TopOn для баннеров/interstitial/native.
- OneSignal App ID f2a35f4f-9ae4-41ac-b40d-ed960fc01377 — пуши (инициализация в StartActivity).

- AdMob AppID ca-app-pub-5517092987757413~8240781391 (в remote JSON; в манифесте также тестовый ca-app-pub-3940256099942544~3347511713) — идентификатор рекламного приложения Google.
- static.gamezop.com / 10761.play.gamezop.com — картинки и HTML5-игры «белой» оболочки.
- api.onesignal.com / *.anythinktech.com — бэкенды OneSignal и TopOn.
