SharedPreferences:

Да. Используются Flutter `shared_preferences` (+ native `SharedPreferences` в `Settings`), а также `flutter_secure_storage` / `EncryptedSharedPreferences`. По строкам `libapp.so` и коду хранятся: `theme/isDarkMode/currentTheme`; флаги онбординга и уведомлений (`/onboarding`, `/notifications`, `notificationsPermissionGranted/Requested`); состояние VPN (`/vpn_state`, `lastVpnConfig`, `favoriteVpnConfigs`, `vpnConfigurations`); `special offer` (`/special_offer`); `access code` (`/access_code`); кэш удалённого конфига (`cachedMainConfig`, `cachedApiHost`, `cachedDomainList`); подписка/оплата (`hasActiveSubscription`, `isSubscriptionActive`, `isPaid`, `mobileAppToken`, `token`); гео и установка (`countryCode`, `installTime`, `installerStore`); режимы (`isReviewMode/review_mode`, `isWebViewOpen/useWebView`); `integrity/token` после Play Integrity; `analytics/ads/feedback/share/paidAccess` конфига.

Есть ли клоака:

да — признаки клоаки/двойного режима: флаги `isReviewMode/review_mode`; гео-детект через `ip-api.com` / `ipbase` / `ipwho.is`; удалённый `get_app_config/mainAppConfig` с кэшем; переключение `useWebView/isWebViewOpen` (in-app `WebView`, в т.ч. `payment`); ссылка <https://www.npvpn.space/id298347>; учёт `installerStore`; отдельные сценарии `special_offer` / `paidAccess`. Похоже на показ «чистого» VPN-режима для ревью/нецелевых и иного (`WebView/оффер`) сценария по конфигу и гео.
