Про домен aomedia.org

Домен Alliance for Open Media попадает из медиа-стека (кодеки AV1 и связанные строки библиотек), а не как свой сервер приложения. При открытии показывает сайт организации стандартов без редиректа. По VirusTotal детекций нет (0/91); на вид это обычный справочный ресурс кодеков, а не рекламный оффер.

Про домен api-diagnostics.revenuecat.com

Служебный адрес RevenueCat для диагностики покупок и подписок. В приложении подключён RevenueCat Purchases, поэтому этот хост используется SDK подписок, а не для подмены экрана. При открытии в браузере уводит на сайт RevenueCat; VirusTotal без детекций, выглядит как инфраструктура известного платёжного SDK.

Про домен api-paywalls.revenuecat.com

Endpoint RevenueCat для paywall-конфигураций (экраны оплаты подписки). Приложение использует его вместе с RevenueCat, чтобы показывать и обновлять платные предложения внутри продукта. Редирект на revenuecat.com, детекции VT отсутствуют; на вид безопасный служебный API подписок.

Про домен api-production.8-lives-cat.io

Дополнительный production-хост из экосистемы RevenueCat (брендинг «8 lives cat»). Используется SDK покупок как API-точка, а не как внешний лендинг для пользователя. Публично отвечает Forbidden без редиректа; по VirusTotal чисто, регистратор Cloudflare.

Про домен api.revenuecat.com

Основной API RevenueCat: проверка подписок, синхронизация покупок Google Play Billing и статусов entitlements. Это штатная сетевая точка монетизации приложения. Открывается с редиректом на сайт RevenueCat; VT 0/91, выглядит безопасно.

Про домен bit.ly

Короткий адрес Bitly встречается в связке со ссылками/маркетинговыми переходами (в т.ч. рядом с deep link / партнёрскими URL). Сам по себе это публичный сокращатель ссылок, не сервер клоаки приложения. Один движок на VirusTotal пометил домен (1/91), что типично для массовых short-link сервисов; корень ведёт на bitly.com.

Про домен branch.app.link

Домен платформы Branch для deep linking и атрибуции установок. В манифесте задан Branch Key, а хосты wagerlab*.app.link ведут сюда же по схеме Branch. При открытии редиректит на branch.io; VT без детекций — обычный сервис атрибуции, не оффер-гейт.

Про домен config.ru

Строка config.ru похожа на имя файла Ruby Rack из зависимостей, ошибочно попавшее в список доменов пайплайна. В коде нет сетевого клиента, который ходил бы на «сайт» config.ru как на проверку трафика. Открыть страницу не удалось (таймаут); по VirusTotal детекций нет — это ложное срабатывание парсера, а не рабочий хост приложения.
