Подозрительные домены	нет
SharedPreferences	сессия/SSO Amazon Identity, weblab и marketplace preferences, attestation state, кэш веб-ресурсов, Amazon Pay preferences, I18n/MASH preferences, очередь Firebase Messaging
Есть ли клоака	нет
Подозрительные слова	нет

Подозрительных кастомных доменов нет: в приложении используются официальные хосты Amazon (amazon.com / региональные витрины вроде amazon.ae, amazon.ca), Google/Firebase и Bugsnag — крупные известные сервисы, в таблицу «Подозрительные домены» не входят. Развилки оффер/белая версия, тихой gate-проверки и подмены Store-названия относительно APK-label не видно: это обычное приложение Amazon Business с WebView витрины, weblab/A-B и собственной рекламой/метриками. GetGatewayUrl при старте — URL HTML-шлюза маркетплейса Amazon, а не проверка «кого пускать на оффер».
